Section 13 - Disposal Considerations

Disposal Methods and Containers: Do not dump large quantities into biological treatment ponds. Laboratory data indicates that if quaternary ammonium compounds are discharged steadily at low concentrations (<15 mg/litre), it may be expected that these salts can be degraded in sewage treatment plants by acclimatized organisms. Before discharging to sewer, contact local sewerage authority. Contact local Waste Disposal Authority regarding all major disposal problems. Rinse empty containers with clear water only, drain and re-seal before disposal or return.
